

PHOTON

The Fusion Photon is Sterling's first half rope that is also certified as a twin. It was manufactured to have the perfect ratio of skinny diameter and light weight, without compromising performance.

The Photon was designed to round out the Fusion series as a performance half rope. With a diameter of 7.8mm and weighing only 41 grams per meter, the Photon is small and light, making rope drag less of a concern over long pitches. We also had it tested and certified as a twin making it The Right Rope for any two rope system!

The Fusion Photon, features Sterling Rope's proprietary DryCore that you'll also find in our entire dynamic rope collection.

Available in both standard and dry finish in 60m, 70m and 80m lengths.

- Diameter	7.8mm
- UIAA Falls	5
- Impact Force	5.6kN
- Weight	41 g/M

- Static Elong.	11.7%
- Dynamic Elong.	35.3%
- Type	Half
